

## Earliest Attested Type-2 Formulas

Marco Dosi

What is given below is the full list of earliest attested T2 formulas that have been used for modelling. NB: the list only includes instances from papyri and inscriptions where the use of one consular name from 1 January is securely recoverable. *E.q.f.n.*-formulas are excluded and provided in Appendix A. Earliest T2 evidence in the post-consular year is given when this is not found in the consular one (in all these cases one year should thus be subtracted; i.e. Vivianus mentioned in P.Oxy. LV 3803 refers to cos. 410). A limited number of instances (in bold) is fragmentary or drops a name due to random errors or politics. As in some of these cases the announcement of a full pair from 1 January is still a possibility (albeit a less likely one), all these instances have been excluded from the list below.

A future revision of the western list, which includes and highlights these exceptions, is in preparation and will be made available as soon as possible.
